PROFILE

*I am a data science and analytics trainee with a background in high-performance operations. I systematically & creatively use my diverse skillset to **add tangible value** to the team, the business, and the end-user. I have a strong commitment to **continuous learning** and am always looking to improve.*

SKILLS & TOOLS

Programming: SQL, Python, R

Tools: Excel, Tableau, Github, Anaconda

Maths: Linear Algebra, Statistics (Hypothesis Testing, AB Testing, CLT, Distributions)

Algorithms: Regression, Classification, Clustering (k-means), PCA, Association Rule Learning, Causal Impact Analysis

PROJECTS

Enhancing Targeting Accuracy Using ML

- Built and compared classification models (Logistic Regression, Random Forest, KNN) in Python (scikit-learn) to predict customer signup likelihood.
- Improved targeting strategy, reducing marketing waste and increasing ROI.
- Performed feature engineering and model validation to optimise model performance, achieving an accuracy score of 0.94 (Random Forest).

The "You Are What You Eat" Customer Segmentation

- Applied k-means clustering to segment customers based on grocery transaction behaviour.
- Identified distinct customer groups, enabling more targeted marketing and personalised promotions.
- Improved understanding of customer behaviour over time through data-driven segmentation.

Compressing Feature Space For Classification Using PCA

- Applied PCA to reduce 100 high-dimensional features to 24 principal components.
- Improved classification efficiency and model performance through dimensionality reduction.
- Enabled more effective targeting of customers likely to purchase.

Understanding Product Relationships Using Association Rule Learning

- Implemented the Apriori algorithm to identify relationships between products in transactional data.
- Generated insights for product bundling, cross-selling, and store layout optimisation.
- Supported more effective promotional strategies based on purchasing patterns.

EXPERIENCE

Sous Chef (Operations & Performance-Focused Role)

Quality Wines, Farringdon

SEPTEMBER 2022 - PRESENT

- Led daily kitchen operations, managing a team of 6 chefs during high-pressure service and ensuring consistent delivery across 90+ covers.
- Analysed daily sales and demand data to optimise prep levels, reducing waste and improving cost efficiency.
- Managed inventory, ordering, and supplier relationships, applying forecasting to maintain optimal stock levels and minimise shortages.
- Streamlined kitchen workflows and service processes, improving ticket times and overall operational efficiency during peak periods.
- Maintained quality control through process standardisation, ensuring consistency across dishes and service.
- Trained and developed junior team members, improving team performance, reliability, and service execution.

EDUCATION

Data Science Infinity (Data Science & Analytics)

2025 - 2026

London School of Economics & Political Science (Data Analytics)

2024 - 2025

Heriot-Watt University (Psychology, BSc)

2011 - 2015

COURSES
& CERTS

Data Science Professional Certification (Data Science Infinity)

Actionable Learnings: Extracted, cleaned, and manipulated data using SQL and Python; applied statistical inference, A/B testing, and causal impact analysis; and built regression, classification, clustering, and association-rule models using full ML workflows (feature engineering, model validation, and automated ML pipelines). Created dashboards in Tableau and deployed a complete ML system to a live Streamlit application. Focused throughout on turning ambiguous business problems into measurable, data-driven solutions.
